INTRODUCTORY

RECOGNIZING the fact that Ornamental Plastic Decorations are an important feature in the development of architectural ornamentation, and desiring to demonstrate to Architects, Builders and Decorators the completeness and high character of our products and our facilities to furnish the most authentic designs, we illustrate selections from our regular lines.

Our line of ceilings are strongly featured because we believe them to be the best values offered at the prices. In calling attention to these we wish to emphasize the important consideration of suggestions, so numerous and attractive as to be readily adapted to meeting many requirements. Special merit in design has been considered in the selections offered; there is distinction in every design and many are exclusive; every detail of these practical ceilings will commend the unequalled values. No especial skill is required placing the ornaments in position. An easy, graceful effect can be obtained, making the work of those interested highly effective.

Designing for special purposes is an important feature of our business, and we are prepared at any time to submit original designs for the accomplishment of any specific purpose, or to act in conjunction and complete the idea or design for those contemplating such. We therefore invite correspondence, and an exchange of ideas with any interested in this direction.

We are constantly designing new models in our special line and offer our customers every advantage in the way of strictly authentic designs at reasonable prices. The many innovations will be welcomed by those who have experienced difficulty in meeting the requirements of critical buyers.

Appreciating the liberal patronage that has been tendered in the past we shall aim to deserve an increase in the future.

THE PLASTIC RELIEF MFG. CO.

INSTRUCTIONS

MATERIAL

Fibrous plaster for interior plaster finish. Exterior composition for exterior decorations.

FIGURE 1—COVES

A section of cove is shown, giving its exact position to ceiling and wall. Coves are finished with a moulding on both ceiling and wall, the average thickness of material being $\frac{1}{2}$ inch. On wood lath, coves should be fastened with nail or screws as shown in Figure 1; on tile construction wood strips should be fastened to ceiling with toggle bolts and cove screwed to same as shown in Figure 2. Screw and nail holes, also joints between casts, should be pointed up with plaster of paris mixed with an equal part of paper hangers' paste.

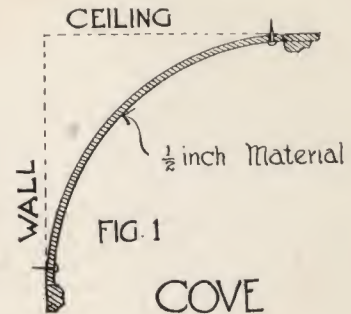

FIGURE 2—CORNICES

Follow instructions as given for Coves.

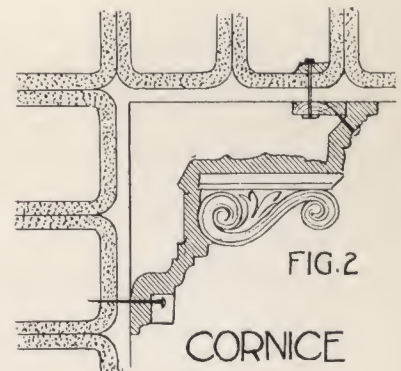

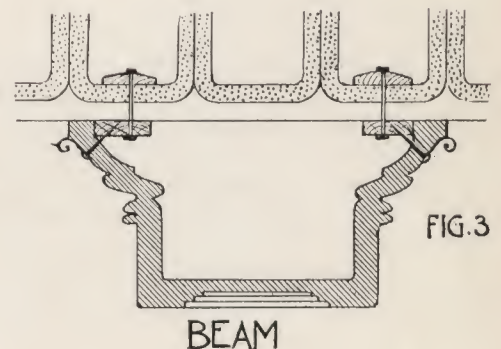

FIGURE 3—BEAMS

Follow instructions as given for Coves. Beams are cast complete, showing three faces. Thickness of material $\frac{1}{2}$ inch.

CEILINGS

Decorations should be applied with plaster of paris mixed with an equal part of paper hangers' paste; center pieces and heavy ornaments should be secured with screws or nails.

EXTERIOR COMPOSITION

Should be screwed or nailed in position and painted same as woodwork. Fill joints with oil putty after first coat of paint has been applied.
